Retrospective Report

Sprint 1: 29.10.2024 - 13.11.2024

In the first sprint, the team focused primarily on the theoretical foundations of the project, as well as conducting initial tests and reviewing models. This period was crucial for establishing the roles and defining tasks. There was also significant attention given to aligning the project with the DDS methodology and preparing for future tasks, including the creation of work packages.

Sprint 2: 14.11.2024 - 20.11.2024

During the second sprint, the team encountered gaps in the theoretical framework that required additional review. We revisited and refined the theoretical part to ensure all aspects were covered and well-understood. This review was essential to avoid issues in the later stages of the project.

Sprint 3: 21.11.2024 - 25.12.2024

The third sprint involved a continued assessment of both the theory and the model. We revisited the theoretical aspects to ensure that everything was implemented correctly and to identify any needed adjustments. In parallel, we reviewed the model's performance, discussed necessary changes, and made sure all deliverables and artifacts were on track for completion. This sprint also included the identification and resolution of bugs and issues in the dataset, ensuring progress toward finalizing the project.

Note: A sprint was missed in December due to a deadline for other subjects, which impacted the project's schedule.
